The Golf Ball

information and specifications

Make your mark

See how far you can drive!!

Its simple with a DTG - Golfers toolbox

Our unique patented auto combination of pre heating and digital printing application - allows you to create unique and distinctive logo branding and photographic prints direct to golf items such as balls, markers, tees and other golfing advertising items.

The DTG golfers toolbox makes it all so easy.

Simply

- Load your graphic from your favourite PC/Mac programme or direct from your camera flash card, if needed.
- Load your golf balls - select your print position with our template and positioning software.
- Print!! That's it. Your balls (6) are printed in under 30 seconds and ready to see how far you can drive!

All balls printed with our specialty inks are ready without the need for pre or post treatment. However, as balls do get knocked around to achieve a longer lasting adhesion you can optionally apply a post treatment laminate that will increase print longevity against constant strikes.
